

REDEFINE HD VISUALIZATION

VISIONPRO LED DISPLAY

VisionPro 26" LED Display

Continuing Stryker's legacy of best in class surgical visualization, the VisionPro 26" LED Display is designed to optimize the surgical image and enhance the experience in the operating room. The increased brightness, contrast, and custom gamma curves provide surgeons improved clarity and color reproduction across all surgical specialties.

As the leader in endoscopic video systems and integrated operating rooms, Stryker possesses a great understanding of the challenges posed by various OR environments. The VisionPro 26" LED Display was designed with a protective layer to reduce accidental panel damage. The double-sided anti-reflective coating on the protective layer also reduces glare and reflection, which is often experienced in the OR.

Built-in handles on both sides of the display assist the placement during setup and mid-procedure. This convenience also reduces the chance of accidental button presses or smudges on the viewing area. The display is also equipped with integrated cable straps and a rear cable cover to maintain connectivity and to protect the cables from damage during cleaning or movement.

Features:

- 26" IPS Alpha panel with LED backlight
- 16:9 aspect ratio
- 1920 x 1080 native resolution
- 9 preset specialty settings
- On-screen user interface with shortcut keys
- Custom gamma curves
- Integrated protective screen layer with 3H hardness
- Double-sided anti-reflective coating
- Built-in handles to aid in monitor placement
- 30% thinner than previous generation 26" displays
